Wash hands before breaks and at the end of work.
Keep away from foodstuffs, beverages and feed.
Avoid contact with the eyes and skin.
Immediately remove all soiled and contaminated clothing.

Individual Protection Measures:
Protective clothing needs to be selected specifically for the workplace, depending on concentrations and quantities of hazardous substances handled. The chemical resistance of the protective equipment should be enquired at the respective supplier.

Respiratory Protection:
Required when vapours/areosols are generated

Protection of Hands:

Protective gloves – The glove material has to be impermeable and resistant to the product/substance/preparation. Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation.
Material of Gloves:
Nitrile, thickness: $\geq 0.11$ mm
The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material cannot be calculated in advance and has therefore to be checked prior to the application.

Penetration time of glove material:
Value of the permeation: Level $\geq 6$
The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

Eye Protection:
Tightly sealed goggles

Body Protection:
Protective work clothing
