Material Safety Data Sheet

Rotavirus
(Fecal)

PRODUCT: Stool Antigen Microwell ELISA’s
Cat # 8306-3

Diagnostic Automation, Inc. firmly believes that safe use of laboratory reagents requires knowledge of the physical, chemical, and hazardous properties of the substances. Material Safety Data Sheets (MSDS) are the primary vehicle for transmitting this detailed information.

In evaluating this product a number of guidelines are observed.

1. This product is a mixture, not a "pure" substance. Since minimal objective scientific information is available on the hazards of the mixture, it is assumed to have the same hazards as the component parts.

2. An individual MSDS is prepared for each component determined to be a health hazard and which comprises 1 % or greater of the mixture. For a chemical identified as a carcinogen, a MSDS is prepared if the concentration is 0.1% or greater.

3. An individual MSDS is prepared for each component, which has been determined to present a physical hazard.

5. According to the guidelines above, individual MSDS are required for:

   Phosphoric Acid (Stop Solution is 5% acid, 95% water)
   Thimerosal (used as a preservative in most of the reagents)
   TMB Chromogen
   Formaldehyde (Controls)
